**Section 1 - Chemical Product and Company Identification**

- **Chemical Formula:** Mixture
- **Product Use:** Various fabricated aluminum parts and products.
- **Other Designations:** Alloys 0333, 1050, 1350, 1100, 3003, 3004, 3005, 3105, 5005, 5042, 5050, 5052, 5082, 5083, 5086, 5182, 5454, 5754, 6061

Alcoa Inc.
201 Isabella Street
Pittsburgh, PA 15212-5858

**Manufacturer/Supplier**
Alcoa Australia Rolled Products
Point Henry Works
Point Henry Road
Moolap, Geelong, Victoria 3220 Australia

Alcoa Australia Rolled Products
Yennora Works
Kiora Crescent
Yennora, New South Wales 2161 Australia

**Emergency Information:**
Alcoa Australia: +61352451657
Alcoa USA: +1-412-553-4001

**Product Information:**
Alcoa Australia: +61352451777

**Website:** For a current MSDS, refer to Alcoa websites: www.alcoa.com or Internally at my.alcoa.com EHS Community

**Section 2 - Composition / Information on Ingredients**

Complete composition is provided below and may include some components classified as non-hazardous.

**Component Information**
* Coatings include vinyl, epoxy, polyester, siliconized polyester, acrylic, fluorocarbons, polyurethane, petrolatum, chromium conversion and titanium conversion.
Additional compounds which may be formed during processing or recycling are listed in Section 8.

**Section 3 - Hazards Identification**

**Emergency Overview**
Solid: coil, sheet or tubing. Various colors. Odorless. Non-combustible as supplied. Small chips, fine turnings and dust from processing may be readily ignitable.
Explosion/fire hazards may be present when (See Sections 5, 7 or 10 for additional information):
* Dust or fines are dispersed in the air.
* Chips, dust or fines are in contact with water.
* Dust or fines are in contact with certain metal oxides (e.g. rust).
* Molten metal is in contact with water/moisture or certain metal oxides (e.g. rust).

Dust and fume from processing can cause irritation of eyes, skin and upper respiratory tract; metal fume fever and lung disease. Combustion of the coatings can generate toxic and irritating gases.

Not classified as a Hazardous Substance by the National Occupational Health and Safety Commission, Australia.

**Potential Health Effects**

The health effects listed below are not likely to occur unless processing of this product generates dust or fumes.

(If dusts or fumes are generated by processing)

**Eyes**

Can cause irritation.

**Skin**

Can cause irritation.

**Inhalation**

Can cause irritation of upper respiratory tract, metal fume fever and other health effects listed below. Cancer and reproductive hazard.

**Health Effects of Ingredients**

**Manganese dust or fumes**   
*Chronic overexposures*: Can cause inflammation of the lung tissue, scarring of the lungs (pulmonary fibrosis), central nervous system damage, secondary Parkinson's disease and reproductive harm in males.

**Chromium dust and mist**   
Can cause irritation of eyes, skin and respiratory tract.  **Chromium and trivalent chromium**  
IARC/NTP: Not classified by IARC.

**Silicon, inert dusts**   
*Chronic overexposures*: Can cause chronic bronchitis and narrowing of the airways.

**Aluminum dust, fines and fumes**   
Low health risk by inhalation. Generally considered to be biologically inert (milling, cutting, grinding).

**Health Effects Of Additional Compounds That May Be Formed During Processing**

The following could be expected if welded, remelted or otherwise processed at elevated temperatures.

**Hexavalent chromium (Chrome VI)**   
Can cause irritation of eyes, skin and respiratory tract.  **Skin contact**: Can cause irritant dermatitis, allergic reactions and skin ulcers.  **Chronic overexposures**: Can cause perforation of the nasal septum, respiratory sensitization, asthma, the accumulation of fluid in the lungs (pulmonary edema), lung damage, kidney damage, lung cancer, nasal cancer and cancer of the gastrointestinal tract.  **IARC/NTP**: Listed as "known to be a human carcinogen" by the NTP. Listed as carcinogenic to humans by IARC (Group 1)*.

**Magnesium oxide fumes**   
Can cause irritation of eyes and respiratory tract.  **Acute overexposures**: Can cause nausea, fever, chills, shortness of breath and malaise (metal fume fever).

**Manganese oxide fumes**   
Can cause irritation of eyes, skin and respiratory tract.  **Acute overexposures**: Can cause nausea, fever, chills, shortness of breath and malaise (metal fume fever).

**Silica, amorphous**   
**Acute overexposures**: Can cause dryness of eyes, nose and upper respiratory tract.

**Iron oxide**   
**Chronic overexposures**: Can cause benign lung disease (siderosis).  **Ingestion**: Can cause irritation of gastrointestinal tract, bleeding, changes in the pH of the body fluids (metabolic acidosis) and liver damage.
Alumina (aluminum oxide)  Low health risk by inhalation. Generally considered to be biologically inert.

Welding, plasma arc cutting, and arc spray metalizing can generate ozone. Ozone Can cause irritation of eyes, nose and upper respiratory tract. Acute overexposures: Can cause shortness of breath, tightness of chest, headache, cough, nausea and narrowing of airways. Effects are reversible on cessation of exposure. Acute overexposures (high concentrations): Can cause respiratory distress, respiratory tract damage, bleeding and the accumulation of fluid in the lungs (pulmonary edema). Effects can be delayed up to 1-2 hours. Additional information: Studies with experimental animals by inhalation have found genetic damage, reproductive harm, blood cell damage, lung damage and death.

Welding fumes  IARC/NTP: Listed as possibly carcinogenic to humans by IARC (Group 2B)*. Additional Information: In one study, occupational asthma was associated with exposures to fumes from aluminum welding.

Combustion of the coatings can generate Hydrogen chloride or Hydrogen fluoride gases.

Hydrogen chloride gas  Can cause severe irritation and corrosive burns of eyes, skin and upper respiratory tract. Acute overexposures: Can cause the accumulation of fluid in the lungs (pulmonary edema).

Hydrogen fluoride gas  Can cause severe irritation of eyes, mucous membranes, skin and respiratory tract. Acute overexposures: Can cause cough, shock, the accumulation of fluid in the lungs (pulmonary edema) and death. Effects can be delayed up to 24 hours.

*IARC Classification Definitions
Group 1: The agent is carcinogenic to humans. There is sufficient evidence that a causal relationship existed between exposure to the agent and human cancer.  
Group 2B: The agent is possibly carcinogenic to humans. Generally includes agents for which there is limited evidence in humans and less than sufficient evidence in experimental animals.

Medical Conditions Aggravated By Exposure to the Product and/or Components
Asthma, chronic lung disease, skin rashes and secondary Parkinson's disease.

*** Section 4 - First Aid Measures ***

First Aid: Eyes
Dust or fume from processing: Flush eyes with plenty of water or saline for at least 15 minutes. Consult a physician.

First Aid: Skin
Dust or fume from processing: Wash skin with soap and water for at least 15 minutes. Consult a physician if irritation persists.

First Aid: Inhalation
Dust or fume from processing: Remove to fresh air. If unconscious or severely injured, check for clear airway, breathing and presence of pulse. Perform CPR if there is no pulse or respiration. Consult a physician.

*** Section 5 - Fire Fighting Measures ***

Flammable/Combustible Properties
This product does not present fire or explosion hazards as shipped. Small chips, turnings, dust and fines from processing may be readily ignitable.

Fire/Explosion
May be a potential hazard under the following conditions:
* Dust or fines dispersed in the air can be explosive. Even a minor dust cloud can explode violently.
* Chips, dust or fines in contact with water can generate flammable/explosive hydrogen gas. Hydrogen gas could present an explosion hazard in confined or poorly ventilated spaces.
Dust or fines in contact with certain metal oxides (e.g., rust). A thermite reaction, with considerable heat generation, can be initiated by a weak ignition source.

Molten metal in contact with water/moisture or other metal oxides (e.g., rust, copper oxide). Moisture entrapped by molten metal can be explosive. Contact of molten aluminum with other metal oxides can initiate a thermite reaction. Finely divided metals (e.g., powders or wire) may have enough surface oxide to produce thermite reactions/explosions.

**Extinguishing Media**

Use Class D extinguishing agents on dusts, fines or molten metal. Use coarse water spray on chips and turnings.

**Fire Fighting Equipment/Instructions**

Fire fighters should wear NIOSH approved, positive pressure, self-contained breathing apparatus and full protective clothing when appropriate.

---

**Section 6 - Accidental Release Measures**

Small/Large Spill

Collect scrap for recycling. If molten: Contain the flow using dry sand or salt flux as a dam. Do not use shovels or hand tools to halt the flow of molten aluminum. Allow the spill to cool before remelting as scrap.

---

**Section 7 - Handling and Storage**

Handling/Storage

Avoid generating dust. Avoid contact with sharp edges or heated metal. Hot and cold aluminum are not visually different. Hot aluminum does not necessarily glow red.

Requirements for Processes Which Generate Dusts or Fumes

If processing of these products includes operations where dust or extremely fine particulate is generated, obtain and follow the safety procedures and equipment guides contained in Aluminum Association Bulletin F-1 and National Fire Protection Association (NFPA) brochures listed in Section 16. Cover and reseal partially empty containers. Use non-sparking handling equipment. Provide grounding and bonding where necessary to prevent accumulation of static charges during dust handling and transfer operations. (See Section 15).

Local ventilation and vacuum systems must be designed to handle explosive dusts. Dry vacuums and electrostatic precipitators must not be used. Dust collection systems must be dedicated to aluminum dust only and should be clearly labeled as such. Do not co-mingle fines of aluminum with fines of iron, iron oxide (rust) or other metal oxides.

Do not allow chips, fines or dust to contact water, particularly in enclosed areas.

Avoid all ignition sources. Good housekeeping practices must be maintained.

Requirements for Remelting of Scrap Material and/or Ingot

Molten metal and water can be an explosive combination. The risk is greatest when there is sufficient molten metal to entrap or seal off the water. Water and other forms of contamination on or contained in scrap or remelt ingot are known to have caused explosions in melting operations. While the products may have minimal surface roughness and internal voids, there remains the possibility of moisture contamination or entrapment. If confined, even a few drops of water can lead to violent explosions.

All tooling and containers which come in contact with molten metal must be preheated or specially coated and rust free. Molds and ladles must be preheated or oiled prior to casting. Any surfaces that may contact molten metal (e.g., concrete) should be specially coated.
Drops of molten metal in water (e.g. from plasma arc cutting), while not normally an explosion hazard, can generate enough flammable hydrogen gas to present an explosion hazard. Vigorous circulation of the water and removal of the particles minimize the hazards.

During melting operations, the following minimum guidelines should be observed:
* Inspect all materials prior to furnace charging and completely remove surface contamination such as water, ice, snow, deposits of grease and oil or other surface contamination resulting from weather exposure, shipment, or storage.
* Store materials in dry, heated areas with any cracks or cavities pointed downwards.
* Preheat and dry large or heavy items such as ingot adequately before charging into a furnace containing molten metal. This is typically done by use of a drying oven or homogenizing furnace. The drying cycle should bring the internal metal temperature of the coldest item of the batch to 400°F and then hold at that temperature for 6 hours.

**Section 8 - Exposure Controls / Personal Protection**

Engineering Controls
Use with adequate explosion-proof ventilation to meet the limits listed in Section 8, Exposure Guidelines.

Personal Protective Equipment

Respiratory Protection
Use NIOSH-approved respiratory protection as specified by an Industrial Hygienist or other qualified professional if concentrations exceed the limits listed in Section 8, Exposure Guidelines. Suggested respiratory protection: N95, acid gas cartridge if hydrogen chloride or hydrogen fluoride are generated

Eye Protection
Wear safety glasses/goggles to avoid eye contact.

Skin Protection
Wear appropriate gloves to avoid any skin injury.

General
Personnel who handle and work with molten metal should utilize primary protective clothing like polycarbonate face shields, fire resistant tapper's jackets, neck shades (snoods), leggings, spats and similar equipment to prevent burn injuries. In addition to primary protection, secondary or day-to-day work clothing that is fire resistant and sheds metal splash is recommended for use with molten metal. Synthetic materials should never be worn even as secondary clothing (undergarments).

Exposure Guidelines

A: General Product Information
Alcoa recommends an Occupational Exposure Limit for Hexavalent Chromium Compounds [chromium (VI) - both soluble and insoluble forms] of 0.25 ug/m3 TWA as chromium.
Alcoa recommends Occupational Exposure Limits for Manganese of 0.05 mg/m3 TWA (total particulate) and 0.02 mg/m3 TWA (respirable fraction).
Alcoa recommends an Occupational Exposure Limit for Hydrogen Fluoride of 2.5 mg/m3 TWA and 4.9 mg/m3 STEL.

B: Component Exposure Limits

**Aluminum (7429-90-5)**
ACGIH 10 mg/m3 TWA (metal dust)
OSHA 15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)

**Manganese (7439-96-5)**
ACGIH 0.2 mg/m3 TWA
OSHA 5 mg/m3 Ceiling (fume)

**Silicon (7440-21-3)**
ACGIH 10 mg/m3 TWA
OSHA 15 mg/m3 TWA (total dust); 5 mg/m3 TWA (respirable fraction)

**Chromium (7440-47-3)**
ACGIH 0.5 mg/m3 TWA
OSHA 1 mg/m3 TWA
C: Exposure Limits for Additional Compounds Which May Be Formed During Processing

Alumina (non-fibrous) (1344-28-1)
ACGIH 10 mg/m³ TWA (particulate matter containing no asbestos and < 1% crystalline silica)
OSHA 15 mg/m³ TWA (total dust); 5 mg/m³ TWA (respirable fraction)

Magnesium oxide fume (1309-48-4)
ACGIH 10 mg/m³ TWA (inhaled fraction)
OSHA 15 mg/m³ TWA (total dust); 5 mg/m³ TWA (respirable fraction)

Manganese inorganic compounds (Not Available)
ACGIH 0.2 mg/m³ TWA (as Mn) (related to Manganese compounds, inorganic)
OSHA 5 mg/m³ Ceiling (as Mn)

Silica fume (amorphous) (69012-64-2)
ACGIH 2 mg/m³ TWA (respirable fraction)

Iron oxide (1309-37-1)
ACGIH 5 mg/m³ TWA (dust and fume, as Fe)
OSHA 10 mg/m³ TWA

Chromium (II) compounds (Not Available)
OSHA 0.5 mg/m³ TWA (as Cr)

Chromium (III) compounds (as Cr) (Not Available)
ACGIH 0.5 mg/m³ TWA (as Cr)
OSHA 0.5 mg/m³ TWA (as Cr)

Chromium (VI) compounds (certain water insoluble forms) (Not Available)
ACGIH 0.01 mg/m³ TWA (as Cr)

Chromium (VI) compounds- water soluble (Not Available)
ACGIH 0.05 mg/m³ TWA (as Cr)

Chromates (Not Available)
OSHA 0.1 mg/m³ Ceiling

Ozone (10028-15-6)
ACGIH 0.05 ppm TWA (heavy work); 0.08 ppm TWA (moderate work); 0.10 ppm TWA (light work); 0.20 ppm TWA (heavy, moderate or light workloads, less than or equal to 2 hours)
OSHA 0.1 ppm TWA; 0.2 mg/m³ TWA

Hydrogen chloride (7647-01-0)
ACGIH 2 ppm Ceiling
OSHA 5 ppm Ceiling; 7 mg/m³ Ceiling

Hydrogen fluoride (7664-39-3)
ACGIH 0.5 ppm TWA (as F)
ACGIH 2 ppm Ceiling (as F)
OSHA 3 ppm TWA

*** Section 9 - Physical & Chemical Properties ***

Physical State: Solid: coil, sheet or tubing
Boiling Point: Not applicable
Vapor Pressure: Not applicable
Solubility in Water: None
Density: Range: generally 2.63-3.12 g/cm³ (0.095-0.113 lb/in³)
Odor: Odorless
Octanol-Water Coefficient: Not applicable

Appearance: Various colors
Melting Point: Range: generally 900-1200°F (482-649°C)
Vapor Density: Not applicable
Specific Gravity: See Density
pH Level: Not applicable
Odor Threshold: Not applicable
**Section 10 - Chemical Stability & Reactivity Information**

**Stability**
Stable under normal conditions of use, storage, and transportation as shipped.

**Conditions to Avoid**
- Chips, fines, dust and molten metal are considerably more reactive with the following:
  - **Water:** Slowly generates flammable/explosive hydrogen gas and heat. Generation rate is greatly increased with smaller particles (e.g., fines and dusts). Molten metal can react violently/explosively with water or moisture, particularly when the water is entrapped.
  - **Heat:** Oxidizes at a rate dependent upon temperature and particle size.
  - **Strong oxidizers:** Violent reaction with considerable heat generation. Can react explosively with nitrates (e.g., ammonium nitrate and fertilizers containing nitrate) particularly when heated or molten.
  - **Acids and alkalis:** Reacts to generate flammable/explosive hydrogen gas. Generation rate is greatly increased with smaller particles (e.g., fines and dusts).
  - **Halogenated compounds:** Many halogenated hydrocarbons, including halogenated fire extinguishing agents, can react violently with finely divided aluminum.
  - **Iron oxide (rust) and other metal oxides (e.g., copper and lead oxides):** A violent thermite reaction generating considerable heat can occur. Reaction with aluminum fines and dusts requires only very weak ignition sources for initiation. Molten aluminum can react violently with iron oxide without external ignition source.
  - **Iron powder and water:** An explosive reaction forming hydrogen gas occurs when heated above 1470°F (800°C).

**Hazardous Decomposition**
Combustion products of coatings include carbon monoxide, carbon dioxide, hydrogen chloride, chlorinated hydrocarbons, hydrogen fluoride and partially oxidized hydrocarbons.

**Section 11 - Toxicological Information**

**Health Effects of Ingredients**

A: General Product Information: No information available for product.

B: Component Analysis - LD50/LC50
- **Manganese (7439-96-5)**
  - Oral LD50 Rat: 9 g/kg
- **Iron (7439-89-6)**
  - Oral LD50 Rat: 984 mg/kg
- **Silicon (7440-21-3)**
  - Oral LD50 Rat: 3160 mg/kg

**Carcinogenicity**

A: General Product Information: No information available for product.

B: Component Carcinogenicity
- **Chromium (7440-47-3)**
  - ACGIH: A4 - Not Classifiable as a Human Carcinogen
  - IARC: Monograph 49, 1990 (Listed under Chromium and Chromium compounds)

**Section 12 - Ecological Information**

**Ecotoxicity**

A: General Product Information
No information available for product.

B: Component Analysis - Ecotoxicity - Aquatic Toxicity
No ecotoxicity data was found for this product's components.

**Environmental Fate**
No information available for product.
**Section 13 - Disposal Considerations**

**Disposal Instructions**
Reuse or recycle material whenever possible. Material may be disposed of at an industrial landfill.

**US EPA Waste Number & Descriptions**

**A: General Product Information**
RCRA Status: Must be determined at time material is disposed. If material is disposed as waste, it must be characterized under RCRA according to 40 CFR, Part 261, or state equivalent in the U.S.

**B: Component Waste Numbers**
RCRA waste codes other than described under Section A may apply depending on use of product. Refer to 40 CFR 261 or state equivalent in the U.S.

**Section 14 - Transportation Information**

**Special Transportation**

**Canadian TDG Hazard Class & PIN:**
Not regulated

**International Transportation Regulations**

**Australia Transport Information:** Not regulated in Australia (non-Dangerous Good)

**Section 15 - Regulatory Information**

**US Federal Regulations**

**A: General Product Information**
In reference to Title VI of the Clean Air Act of 1990, this material does not contain nor was it manufactured using ozone-depleting chemicals. All electrical equipment must be suitable for use in hazardous atmospheres involving aluminum powder in accordance with 29 CFR 1910.307. The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installation that will meet this requirement.

**B: Component Analysis**
This material contains one or more of the following chemicals required to be identified under SARA Section 302 (40 CFR 355 Appendix A), SARA Section 313 (40 CFR 372.65) and/or CERCLA (40 CFR 302.4).

- **Aluminum (7429-90-5)**
  - SARA 313: 1.0 % de minimis concentration (dust or fume only)

- **Manganese (7439-96-5)**
  - SARA 313: 1.0 % de minimis concentration

- **Chromium (7440-47-3)**
  - CERCLA: 5000 lb final RQ (no reporting of releases of this hazardous substance is required if the diameter of the pieces of the solid metal released is equal to or exceeds 0.004 inches);
  - 2270 kg final RQ (no reporting of releases of this hazardous material is required if the diameter of the pieces of the solid metal released is equal to or exceeds 0.004 inches)
Material Safety Data Sheet

Product Name: ALUMINIUM SHEET COIL AND FOIL - BARE AND COATED

SARA 311/312 Physical and Health Hazard Categories:
- Immediate (acute) Health Hazard: Yes, if particulates/fumes generated during processing.
- Delayed (chronic) Health Hazard: Yes, if particulates/fumes generated during processing.
- Fire Hazard: No
- Sudden Release of Pressure: No
- Reactive: Yes, if molten

State Regulations
A: General Product Information
   PENNSYLVANIA "Special Hazardous Substance": Chromium; Chromium compounds, hexavalent.
   Chemical(s) known to the State of California to cause cancer: Chromium (hexavalent compounds)

ALUMINIUM SHEET COIL AND FOIL
BARE AND COATED

WARNING

Hazards: Small chips, fine turnings and dust may ignite readily. Explosion potential may be present when: (1) dusts or fines are dispersed in the air, (2) fines, dust or molten aluminum are in contact with certain metal oxides, i.e., rust or (3) chips, fines, dust or molten aluminum are in contact with water or moisture.

Potential health effects from dusts generated during cutting, grinding or polishing:
- Chronic overexposures to manganese dust can cause central nervous system damage, scarring of the lungs and reproductive harm in males.
- Chronic overexposure to silicon dust can cause chronic bronchitis.

Additional potential health effects from welding, burning or melting:
- Overexposure to fumes (fine dusts) of magnesium oxide and manganese oxide may cause metal fume fever by inhalation.
- Overexposure by inhalation to dust or fume (fine dusts) containing hexavalent chromium compounds may cause nasal and/or lung cancer.
- Chronic overexposure to iron oxide dust or fume may cause benign lung disease (siderosis).
- Heating or burning of coatings can generate hydrogen chloride or hydrogen fluoride. Hydrogen chloride and hydrogen fluoride can cause irritation of the eyes, skin and upper respiratory tract. Overexposures can result in fluid in the lungs. Effects from hydrogen fluoride can be delayed up to 24 hours.

WARNING: Chromium (Hexavalent compounds) are chemicals known to the state of California to cause cancer.

Precautions: Use with adequate explosion-proof ventilation. Avoid generating dust. Wear appropriate eye and skin protection to prevent any injury. Wear appropriate respiratory protection (N95, acid gas if hydrogen chloride or hydrogen fluoride is generated) if concentrations exceed the permissible limits.

First aid (dust from processing):
- EYES: Flush eyes with plenty of water or saline for at least 15 minutes. Consult a physician.
- SKIN: Wash with soap and water for at least 15 minutes. Consult a physician if irritation persists.
- INHALATION: Remove to fresh air. If unconscious or severely injured, check for clear airway, breathing, and presence of pulse. Provide CPR if there is no pulse or respiration. Consult a physician.

See Alcoa Material Safety Data Sheet No. 1352 for more information about use and disposal.

Emergency Phone: (412) 553-4001.

INGREDIENTS: CAS NUMBERS:
Aluminum (7429-90-5)  Silicon (7440-21-3)
Magnesium (7439-95-4)  Chromium (7440-47-3)
Manganese (7439-96-5)  Coatings* --
Iron (7439-89-6)

* Include vinyl, epoxy, polyester, siliconized polyester, acrylic, fluorocarbons, polyurethane, petrolatum, chromium conversion and titanium conversion.
